Team Zoo Guide Meeting Minutes
Date: 2/19/2021

Attendees: Rebecca Grantland, Sarah Wathke, Suzanne Moore, Zachary Jones, Hritik (Ricky)
Pathak – late, Christopher Cotton – very late

Items Discussed and Decisions Made:
- Tool and language update
    - XAMPP or some similar software needs to be used to run code connected to database.
    - PHP is being used to connect to the database. It was decided to change from JavaScript to PHP to avoid having to reformat HTML code that has already been created.
- What got done this week?
    - Chris was able to get all areas of the map working with SVG's.
    - Ricky has requested more time to work on the zoom on selection feature to make it look better.
    - Suzanne and Sarah both made a lot of progress on the animal information, but it is still not complete.
    - Rebecca managed to create proof of concept for printing just a row from a database on separate pages without having to program each page individually. She also started on creating the database for the project, but it is nowhere near complete.
- Information Gathering and Database Programing
    - This will be the last week we work on information gathering for the animals. If it is still not complete, we will move on anyway to make sure the code is finished as that should be the priority over getting all the information.
    - The database needs to be programed with all the current information and updated. Hopefully this can be completed in the next 2 to 3 weeks so we can begin to put together the functional parts into a full program and begin testing.
- Design Review
    - All agree that Friday, March 12th at 6pm works for the Design Review Meeting.
    - We will begin working on the presentation this week and perfecting it next week.
    - The presentation will be over Google Slides so all members can work together.
    - Each person will present one informational slide, unless a member volunteers to cover a certain topic, they will be assigned by the team lead, Rebecca.
    - Zach volunteered to make the state diagram of the project. The rest were assigned following the end of the meeting.

Action Items:
- Everyone as available is to work on finishing the animal information.
- Rebecca is to assign the remaining slides to team members, create and share the Google Slides presentation with the group, and work on updating the database if she has time.
- Everyone is to work on their assigned slides.
- Ricky is to work on the zoom feature if he has time after his slide is complete.
